SUMMARY

Backend/Data Engineer (3+ YoE) designing backend systems, LLM integrations, data pipelines, and performance critical systems, alongside making architecture decisions and leading product teams.

SKILLS

- **Programming Languages:** Rust, Python, Go, JavaScript/Typescript, C.
- **Fullstack:** Django, FastAPI (backend), React/Next.js (frontend), PostgreSQL, Redis (database).
- **AI/LLM Integration:** OpenAI Assistants API, Claude Code, MCP Tools, Prompt Engineering.
- **Cloud:** AWS (EC2, Lambda, S3, RDS, DynamoDB, Cognito, Amplify, Athena).
- **Tools:** Celery, OpenAI, Pandas, Numpy, Scrapy, Jira, Docker, Linux, Git.

EXPERIENCE

Software Engineer L3, [Genese Solution](#)

Oct 2025 - Current

- Worked on serverless backend architecture for financial data ingestion and query, processing raw data from Excel files into Athena-backed datasets for analysis and visualization.
- Currently developing a reconciliation platform for portfolio management with banks, brokers, and stock document sources. Worked on ETL pipelines for file processing, core reconciliation matching algorithm, on-premises deployment, and validated data correction workflow.

Software Engineer (Contract-Internship), [Alpen Labs](#)

April 2025 - Jun 2025

- Implemented checkpoint (L1) sync for the [Alpen client](#) (L2 rollup to bitcoin), wrote functional tests (~80% code coverage), and fixed minor bugs.

Technical Consultant, [Third World Nerd](#)

March 2025 - April 2025

- Technical consultant for their [video on fundamentals of bitcoin](#) (15k+ views).

Senior Software Engineer, [ReAlpha \(Naamche\)](#)

Jan 2024 - Nov 2024

- Led backend architecture and delivery for multiple products, heading a team of 7 backend engineers and translating business requirements into logical system designs.
- Optimized PostGIS queries and data pipelines for 2M+ real estate records, reducing P95 API latency from >1s to ~300ms via indexing, materialized views, read replicas, and triggers.
- Integrated third-party systems for document management and verification (DocuSign), search and auto-complete (OpenSearch), CRM, performance monitoring (Sentry) and admin panel.

Software Engineer, [ReAlpha \(Naamche\)](#)

April 2023 - Dec 2023

- Configured multi-tenancy and microservices for authentication, analytics, and reconciliation for a portfolio management application.
- Developed a serverless Python SDK for Dealmaker (internal use within the company).
- Created a floor layout builder (rotate-resize-relocate tables using custom drag-and-drop UI), and configured offline data sync using AWS Datastore for a restaurant point-of-sales app.

EDUCATION

Bachelor in Computer Engineering

Nov 2018 - Apr 2023

Pulchowk Campus, Institute of Engineering, Tribhuvan University, Nepal

PROJECTS

- [Yudhishthira \(Custom Blockchain\)](#) - Built a PoW blockchain with P2PKH address, database integration, API layer, wallet and visualizer support.
- [Guthi: Distributed Framework for Application Development](#) - Contributed to RPC, NTP client (network layer), and collaborative whiteboard (shared filesystem).
- [Redis From Scratch](#) - Redis server-compatible functionality including basic key-value store, master-slave replication, transactions, and persistence.

COMMUNITY WORK

- Founding Member, [IT Club Pulchowk](#) (2021-2022).
- Instructor: Advanced C Workshop ([2021](#), [2022](#)), [Blockchain Fellowship 2022](#),
- Instructor: [Children in Technology \(CIT\) Program 2023](#), teaching robotics, cybersecurity, and digital privacy to students in rural Manang, Nepal.
